

Help on module clarifier:

NAME

clarifier - Deal with unrecognized inputs, including ambiguous ones.

FILE

c:\nickmontfort-curveship-814de6e\clarifier.py

FUNCTIONS

clarify(user\_input, concept, discourse, in\_stream, out\_streams)  
States that input was not understood or attempts to disambiguate input.

english\_command(tokens, concept, discourse)  
Converts a command to English.

E.g., ['LOOK\_AT', '@lamp'] becomes 'look at the lamp'
