

# Printing entire threads

---

**otistdog Mad Scientist**

**12h**

It seems that since the outage and upgrade, it is no longer possible to print out an entire thread?

I had been doing this for the Iron ChIF working groups in order to save them as PDFs for offline reference. Now a PDF is created, but only a handful of posts appear (whichever were most recently loaded) – the rest of the document is only blank pages.

Is there some other way to print entire threads?

Are you using `ctrl + p` to print? It seems to work for me.

---

**otistdog Mad Scientist****10h**

Ctrl+P seems to do the same thing as the normal print command from the dropdown menu, which is what I was using before. It may just be a browser/version compatibility problem affecting me.

I did discover that adding “/print” to the end of the URL for a topic allows saving the whole thread, so my immediate problem is solved. Thanks for confirming the way that it’s *supposed* to be working, Dannii – it looks like my issue and not a site issue.
